Ian Skillen (Isaac Newton Group, Spain) **Adam Burrows** (Princeton University, USA)

Ground-based optical secondary eclipses?

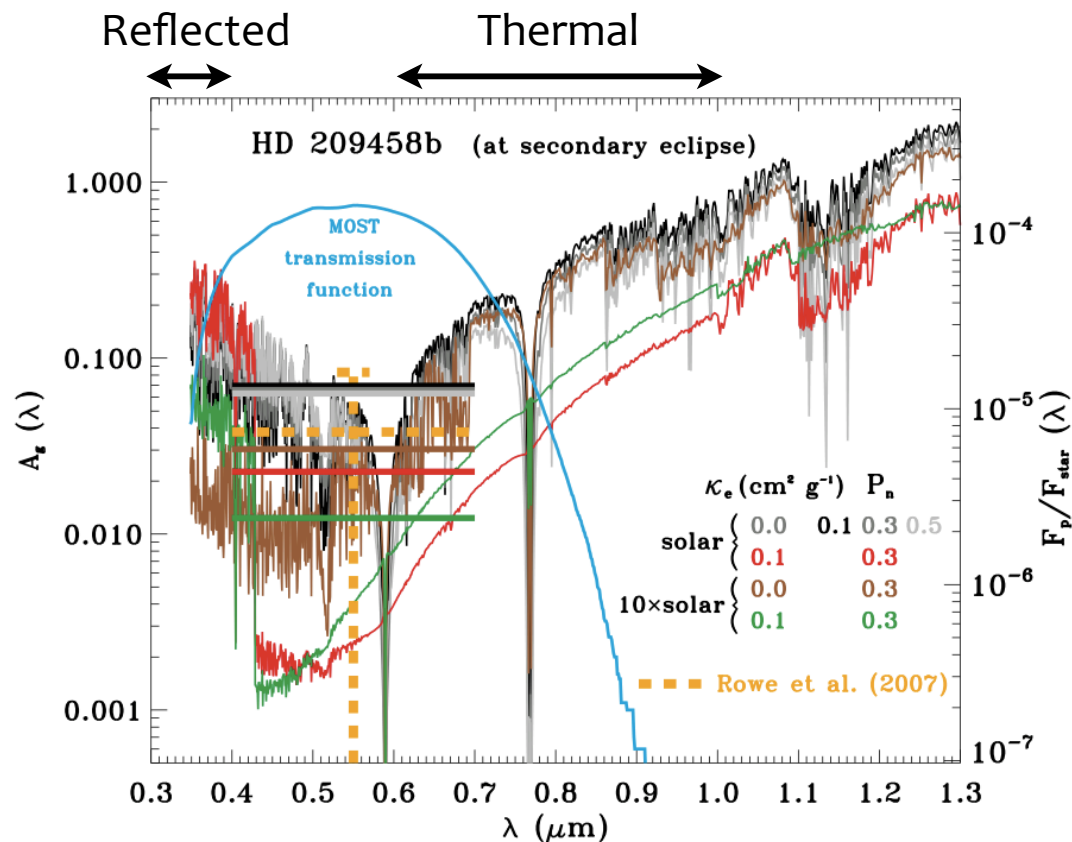

Secondary eclipses (occultations) measure the planet-star flux ratio --> gives planet temperature --> vital for understanding atmospheric chemistry, structure and dynamics

Ground-based optical secondary eclipses?

Secondary eclipses (occultations) measure the planet-star flux ratio --> gives planet temperature --> vital for understanding atmospheric chemistry, structure and dynamics

Secondary eclipse

Burrows et al., 2008

Ground-based optical secondary eclipses?

Secondary eclipses (occultations) measure the planet-star flux ratio --> gives planet temperature --> vital for understanding atmospheric chemistry, structure and dynamics

- day-side temperature
- incident stellar irradiation
- reflected light due to scattering and possible clouds
- absorbing species
- global heat transport
- short-wards of Spitzer: H₂O, CO₂, CH₄ and CO molecular bands

Secondary eclipse

Burrows et al., 2008

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

Targets: WASP-12b, CoRoT-1b, TrES-3b, WASP-3b and HAT-P-7b

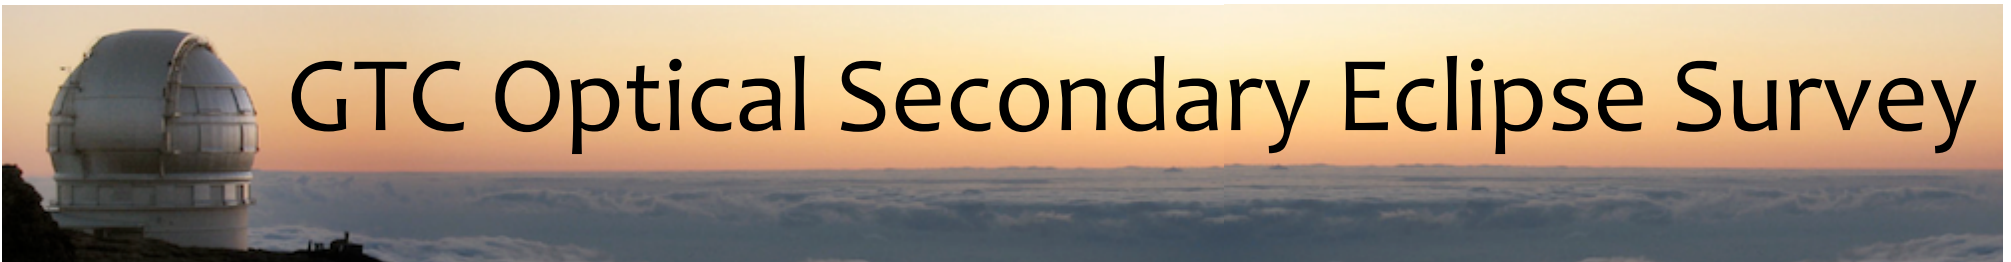

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

Targets: WASP-12b, CoRoT-1b, TrES-3b, WASP-3b and HAT-P-7b
- expected depth > 0.01%, P < 3 days, V < 13.6

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

Targets: WASP-12b, CoRoT-1b, TrES-3b, WASP-3b and HAT-P-7b
- expected depth > 0.01%, P < 3 days, V < 13.6

Dome restriction - can't observe above 73 degrees elevation

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

Targets: WASP-12b, CoRoT-1b, TrES-3b, **HAT-P-23b** and HAT-P-7b
- expected depth $> 0.01\%$, $P < 3$ days, $V < 13.6$

Dome restriction - can't observe above 73 degrees elevation

GTC Optical Secondary Eclipse Survey

Instrument: OSIRIS broad-band imaging CCD (7.8 x 8.5 arcmin) on the 10.4m GTC

Filters: u' (350nm) (Rayleigh scattering), r' i' z' (925nm) (thermal emission)

Targets: WASP-12b, CoRoT-1b, TrES-3b, **HAT-P-23b** and HAT-P-7b
- expected depth > 0.01%, $P < 3$ days, $V < 13.6$

Dome restriction - can't observe above 73 degrees elevation

Technique (bright stars, big telescope):
