<b>1</b>	<b>Introduction</b>	<b>13</b>
1.1	A brief history on the search for exoplanets . . . . .	13
1.2	The detection of exoplanets . . . . .	15
1.2.1	The methods . . . . .	15
1.2.2	Properties of the exoplanets discovered to date . . . . .	17
1.3	Characterising exoplanets . . . . .	20
1.3.1	Analytic equations to derive the planet parameters from the transit light curve . . . . .	20
1.3.2	Analytic equations for the radial velocity variations of a star due to an orbiting planet . . . . .	28
1.3.3	Planetary atmospheres . . . . .	30
1.4	Challenges for the detection and characterisation of exoplanets . . . . .	32
1.4.1	Stellar systems mimicking planetary transits . . . . .	32
1.4.2	Systematics . . . . .	33
1.4.3	Stellar activity . . . . .	33
1.4.4	Uncertainties on the planet parameters . . . . .	35
1.5	Instruments for the detection and characterisation of transiting exoplanets . . . . .	37
1.5.1	Current . . . . .	37
1.5.2	Future of the transiting exoplanet search and characterisation . . . . .	39
1.6	This thesis . . . . .	40
1.6.1	Motivations . . . . .	40
1.6.2	Structure . . . . .	40
<b>2</b>	<b>Transit signal reconstruction</b>	<b>42</b>
2.1	Motivation . . . . .	42
2.2	Data set . . . . .	43
2.2.1	BT2 light curves . . . . .	43
2.2.2	Reference light curve sample . . . . .	44
2.3	Quantifying transit deformation with the Non-linear Iterative Filter . . . . .	45
2.3.1	Definition of the NIF . . . . .	46
2.3.2	NIF quantitative impact on transit parameters . . . . .	47

2.4	A new stellar variability filter: the Iterative Reconstruction Filter . . . . .	49
2.4.1	Definition of the IRF . . . . .	49
2.4.2	Comparison with the Trend Filtering Algorithm (TFA) . . . . .	52
2.4.3	Performance of the IRF on the BT2 transits . . . . .	52
2.5	Discussion on the IRF performance . . . . .	54
2.5.1	Star-planet parameters . . . . .	54
2.5.2	Application to orbital signal reconstruction . . . . .	57
2.5.3	Potential application to transit detection . . . . .	57
2.6	Conclusion . . . . .	58
2.7	Appendix . . . . .	60
2.7.1	Best-fit parameters to BT2 transits . . . . .	60
2.7.2	Full BT2 light curve sample . . . . .	60
<b>3</b>	<b>IRF applied to the transit of CoRoT planets</b> . . . . .	<b>67</b>
3.1	Description of the CoRoT data . . . . .	67
3.1.1	Instrument . . . . .	67
3.1.2	Light curve generation . . . . .	68
3.1.3	Additional light curve pre-processing . . . . .	70
3.1.4	Planetary transit detection and confirmation . . . . .	71
3.2	Primary transit parameters with the IRF-filtering . . . . .	71
3.2.1	Method . . . . .	71
3.2.2	CoRoT-1b . . . . .	75
3.2.3	CoRoT-2b . . . . .	77
3.2.4	CoRoT-3b . . . . .	79
3.2.5	CoRoT-4b . . . . .	81
3.2.6	CoRoT-5b . . . . .	83
3.2.7	CoRoT-6b . . . . .	85
3.2.8	CoRoT-7b . . . . .	87
3.2.9	Discussion . . . . .	89
3.3	IRF performance on CoRoT space data . . . . .	90
3.3.1	Limitations . . . . .	90
3.3.2	Future work . . . . .	90
<b>4</b>	<b>Detecting photons from the CoRoT planets</b> . . . . .	<b>92</b>
4.1	Theory of the secondary eclipse and orbital phase variations . . . . .	93
4.1.1	Planet's emission . . . . .	93
4.1.2	Secondary eclipse . . . . .	94
4.1.3	Planet's equilibrium temperature . . . . .	94
4.1.4	Variations of secondary eclipse's depth with $R_p/R_\star$ , $a/R_\star$ , $A_B$ and $f$ . . . . .	96
4.1.5	Expected depth and phase for the secondary eclipse of CoRoT planets . . . . .	100

4.2	Method . . . . .	102
4.2.1	The IRF as a reconstruction tool . . . . .	102
4.2.2	Light curve processing . . . . .	103
4.2.3	Search for secondary eclipses and orbital phase variations . . . . .	104
4.2.4	Optimising the parameters of the IRF . . . . .	109
4.3	Application to CoRoT planets . . . . .	113
4.3.1	CoRoT-1b . . . . .	113
4.3.2	CoRoT-2b . . . . .	119
4.4	Discussion . . . . .	123
4.4.1	Comparison with the literature . . . . .	123
4.4.2	Performance of the IRF . . . . .	124
4.4.3	Limitations . . . . .	125
4.4.4	Future work . . . . .	126
4.5	Conclusions . . . . .	127
<b>5</b>	<b>Stellar temperatures using equivalent width line-ratios</b>	<b>128</b>
5.1	$T_{\text{eff}}$ calibration of equivalent width line-ratios . . . . .	129
5.1.1	Choosing the line ratios . . . . .	130
5.1.2	Calibrating the line ratios with temperature . . . . .	131
5.1.3	Using the calibration to derive stellar temperatures . . . . .	134
5.1.4	Testing the calibration . . . . .	136
5.1.5	Discussion . . . . .	139
5.2	Comparison to the calibration of Sousa et al. (2009) . . . . .	141
5.3	Applying the calibration to the host stars of CoRoT planets . . . . .	143
5.3.1	Spectra and equivalent width measurements . . . . .	143
5.3.2	Deriving the effective temperatures . . . . .	144
5.3.3	Discussion . . . . .	146
5.4	Conclusion . . . . .	147
5.5	Appendix . . . . .	148
5.5.1	Line list . . . . .	148
5.5.2	List of the calibration stars . . . . .	149
5.5.3	Plot of the line ratio and their calibration . . . . .	150
5.5.4	List of the line ratios and their calibration coefficients . . . . .	157
<b>6</b>	<b>Joint modelling of transit and stellar temperature using an MCMC approach</b>	<b>161</b>
6.1	Markov Chain Monte Carlo . . . . .	162
6.1.1	MCMC implementation . . . . .	162
6.1.2	Jump parameters . . . . .	164
6.1.3	Incorporating external constraints . . . . .	165
6.1.4	Step size . . . . .	166
6.1.5	Chain length . . . . .	166

6.1.6	Gelman & Rubin diagnostic for convergence . . . . .	167
6.1.7	Posterior distributions . . . . .	168
6.1.8	Limitations . . . . .	169
6.2	Application to CoRoT-2b . . . . .	170
6.2.1	Method . . . . .	170
6.2.2	Results . . . . .	172
6.2.3	Discussion . . . . .	179
6.3	Conclusion and future work . . . . .	181
6.3.1	Conclusions . . . . .	181
6.3.2	Future work . . . . .	182
<b>7</b>	<b>Conclusions and prospects</b> . . . . .	<b>184</b>
7.1	Summary of achievements . . . . .	184
7.1.1	A post-detection stellar variability filter . . . . .	184
7.1.2	Application to the transit of CoRoT planets . . . . .	185
7.1.3	Photons from the CoRoT planets . . . . .	186
7.1.4	Precise relative stellar temperature measurement . . . . .	186
7.1.5	Joint modelling of transits and stellar temperatures . . . . .	187
7.2	Conclusions . . . . .	187
7.3	Future improvements and prospects . . . . .	188
<b>A</b>	<b>Constants and acronyms</b> . . . . .	<b>190</b>
A.1	Table of constants . . . . .	190
A.2	Some acronyms . . . . .	190
